McArdle's Quality LAWN GRASS SEED

ESPECIALLY ADAPTED TO GREENWICH AND VICINITY

Grass Mixtures for Sunny Places

Turf-Maker

Highest quality lawn seed available anywhere. Blended to produce fine permanent lawns. Contains Certified Colonial Bent, Creeping Red Fescue, heavyweight Kentucky Blue Grass and

Fancy Red Top. Lb. \$1.79; 5 lbs. \$8.49; 25 lbs. \$41.69; 50 lbs. \$81.85.

McArdle's Special

Our own special mixture particularly adapted to soil conditions in this locality. Possesses exceptional staying qualities and produces a rich green lawn. Lb. \$1.35; 5 lbs. \$6.40; 25 lbs. \$31.00; 50 lbs. \$60.60.

Sunilawn. Although Sunilawn has a rougher texture than the higher-priced mixtures, we consider it very practical. It grows well under rough soil conditions and contains white clover, which we highly recommend. Lb. \$1.10; 5 lbs. \$5.25; 25 lbs. \$24.00; 100 lbs. \$93.00.

Green-Up. This is a quick-growing, economical mixture of grasses. Since the grasses in this mixture are not 100% permanent, Green-Up is often used for a temporary stand of grass. We do not recommend it for permanent lawn areas, although it is often used for such. Again we say that the high-priced grass seed mixtures are the least expensive when you consider the high cost of reseed and renovating. Lb. 65 cts.; 5 lbs. \$2.85; 25 lbs. \$12.98; 50 lbs. \$24.48.

Town of Greenwich Grass Seed Mixture

For Sun or Shade

ESPECIALLY ADAPTED FOR THIS LOCALITY

This is the same formula that is used in the beautiful parks of the Town of Greenwich. Because of its high fescue content, it is adapted to shade and sun. Its velvety green color is outstandingly good, and its texture is very fine. The Illahee Creeping Red Fescue in this mixture helps fight crabgrass. This formula was first offered by us in limited quantity in 1952. Since then, time has proved it to be most satisfactory and very permanent. The repeat business on this new mixture also indicates to us that those who have tried it are most satisfied with the results. Lb. \$1.60; 5 lbs. \$7.75; 25 lbs. \$37.50; 100 lbs. \$138.00.

NEW! Merion Blue Grass Formula

This new grass formula contains by weight 42% Merion Blue Grass, 38% Penn State Chewy Fescue, 15% Highland Bent, and 5% Fancy Red Top. Merion Blue Grass was developed under the leadership of the U. S. Golf Association Green Section and has been tested for several years, receiving the highest ratings at turf trials. Its big advantage is that it is resistant to fungous diseases and stays green during the hot summer months. Because the seed is so small, one pound of this formula will sow 500 to 750 sq. ft. Lb. \$2.65; 5 lbs. \$13.00; 25 lbs. \$62.50. (Supply limited.)

Straight Merion Blue. Lb. \$3.65; 5 lbs. \$18.00; 10 lbs. \$35.00. (Supply limited.)

Grass Mixtures for Shady Places

Turf-Maker

FOR
SHADE

The perfect companion for Turf-Maker. Blended of the finest shade-tolerant grasses. Contains Creeping Red Fescue, Poa trivialis,

Chewing Fescue and Fancy Red Top. Lb. \$1.79; 5 lbs. \$8.49; 25 lbs. \$41.69; 50 lbs. \$81.85.

McARDLE'S SHADY

Another one of our special mixtures particularly adapted to shady areas in this vicinity. Contains Fescue, Kentucky Blue Grass and Rye Grass. Lb. \$1.35; 5 lbs. \$6.40; 25 lbs. \$31.00; 50 lbs. \$60.60.

Seaside Mixture

A special mixture of hardy grasses for use in the vicinity of salt water. Contains Bent, Kentucky Blue, Creeping Red Fescue and Fancy Red Top. Use 1 lb. per 100 sq. ft. Lb. \$1.60; 5 lbs. \$7.75; 25 lbs. \$37.50; 100 lbs. \$138.00.

Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crabgrass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

English Wild White Clover. Lb. \$2.50.

Common White Clover. Lb. \$1.60.

McARDLE'S HI-ORGANIC FERTILIZER

10-6-4

For new and old lawns apply 15 lbs. of this plant food per 1000 sq. ft. Grass Seed may be sown at same time, as this fertilizer has no effect on seed germination. For Evergreens and Trees complete directions on bag. 25 lbs. \$2.25; 50 lbs. \$4.25; 100 lbs. \$8.00; 500 lbs. \$38.75; 2000 lbs. \$150.00.

McArdle's Individual Grasses and Field Seeds

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

ILLAHEE CREEPING RED FESCUE. A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.50; 10 lbs. \$14.50; 25 lbs. \$33.75.

KENTUCKY BLUE GRASS. Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.50; 10 lbs. \$14.50; 25 lbs. \$33.75.

FANCY RED TOP. A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth and nurses the permanent grasses until they become established. Lb. \$1.25; 10 lbs. \$12.00; 25 lbs. \$27.50.

TIMOTHY. A tall-growing Meadow Grass used mostly for hay and pasture. Grows quickly. Lb. 50 cts.; 10 lbs. \$4.75; 25 lbs. \$11.25.

COLONIAL BENT. This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$1.65; 10 lbs. \$16.00; 25 lbs. \$37.50.

DOMESTIC RYE GRASS. Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 25 cts.; 10 lbs. \$2.25; 25 lbs. \$5.00.

ORCHARD GRASS. A field grass used in pastures and meadows. Lb. 70 cts.; 10 lbs. \$6.75; 25 lbs. \$16.25.

PERENNIAL RYE GRASS. A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 40 cts.; 10 lbs. \$3.75; 25 lbs. \$8.00.

POA TRIVIALIS. Rough-stalked Meadow Grass. This variety of Blue Grass is available again. Thrives in shaded lawn areas. Deep green in color. Lb. \$1.25; 10 lbs. \$11.50.

ITALIAN RYE GRASS. A good temporary grass to grow in shaded areas. It is coarse in texture, like the other rye grasses. Lb. 40 cts.; 10 lbs. \$3.75; 25 lbs. \$8.75.

CHEWING FESCUE. A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.10; 10 lbs. \$10.00; 25 lbs. \$22.50.

In Seeding Sloping Areas— USE SALT HAY

Salt Hay is now used in the making of lawns on sloping areas or steep banks where there is danger of the seed and soil washing out from heavy rains. The Salt Hay is applied after the seed is sown and left until the grass begins to develop. At the same time it also shades the newly seeded area and helps to prevent the soil from drying out. For this same reason also Salt Hay is often used on level areas in late spring or early summer seeding.

Since it contains no weed seed, it also makes an ideal mulch for the garden. Widely used in rose beds and around tomatoes and strawberries. It not only keeps the weeds down, but also retains moisture in the soil. Bale covers approximately 400 sq. ft. \$4.95 per bale.

Miscellaneous Field Seeds

Field Clovers

(60 lbs. per bu.)

Clovers are legumes. They take nitrogen from the air and put it into the soil and are, therefore, real soil improvers.

ALFALFA. A forage plant yielding an immense crop of hay. It likes lime. Sow 20 to 30 lbs. per acre. Lb. \$1.00; 10 lbs. \$9.50.

ALSIKE. A perennial Clover usually sown with other field grasses such as timothy and Red Clover. Excellent for pasturage or hay. Lb. 90 cts.; 10 lbs. \$8.50.

LADINO CLOVER. A large type of white Clover used in pasture mixtures for grazing, hay and silage. It is a good soil improver. When sown alone, 3 to 4 lbs. per acre is used. If sown with a mixture, 1 to 2 lbs. is recommended. Lb. \$1.75; 10 lbs. \$15.00.

RED CLOVER, DOMESTIC. One of the most nutritious of forage plants. If sown broadcast, 10 to 15 lbs. per acre is used. Lb. 90 cts.; 10 lbs. \$8.50.

THE CYCLONE SEED SOWER

An accurate portable seeder for all broadcast sowing. Fits over the shoulder and is provided with automatic adjustment for stopping flow of contents when required. 5 lb. capacity. \$5.95.

Liberty Meadow Grass Fertilizer

Fertilize your meadows and pasture areas with a complete fertilizer known as 5-10-5. It contains 5% nitrogen, 10% phosphoric acid and 5% potash. Apply as early as possible in the spring. Use 1200 lbs. per acre. 80 lbs. \$4.00; 800 lbs. \$35.00; 2000 lbs. \$77.00.

A Temporary Lawn of Domestic Rye Grass and White Clover

Where lateness of season, poor soil, or other conditions prevent one from making a permanent lawn, we recommend using a mixture of Domestic Rye 95% and White Clover 5%. Use 5 to 6 lbs. per 1000 sq. ft. When ready for the permanent lawn, this may be turned under. You thereby not only improve the physical condition of the soil by incorporating this green manure into it, but also increase the fertility content. Before reseeding permanently, apply a 10-6-4 lawn fertilizer at the rate of 10 lbs. per 1000 sq. ft. Grass Seed Mixture containing 95% Domestic Rye and 5% White Clover, lb. 45 cts.; 10 lbs. \$4.00; 25 lbs. \$8.75.

GRO-SOD Lawn Food. F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element that induces luscious green leaf growth, predominates in this fertilizer. One pound of GRO-SOD Lawn Food is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.60; 50 lbs. \$4.25; 500 lbs. \$41.50.

Since 1910 McArdle's have been authorized distributors of the reputable lawn and vegetable seeds of F. H. Woodruff & Sons, Milford, Conn.—47 years of a pleasant business relationship that speaks for itself.

McARDLE'S *Perennial and Biennial Flower Seeds*

Many hardy perennials and biennials (plants that require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.

GARDEN-FRESH VEGETABLES TASTE BEST

Vegetables to Start Early Indoors

Vegetables that can be started indoors or in the hotbed are: Artichokes, Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Celery, Eggplant, Leek Lettuce, Parsley, Onions and Tomatoes. February 15 to March 15 is time enough for most of these vegetables. The seed may be started in flower pots, using the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each pot. The pots require less space than flats and may be handled much more easily. To insure against damping off, mix Seedtone Disinfectant with the seeds at time of planting. When the seedlings are ready to be moved they may be transplanted into flats or directly into the hotbed.

ANNUALS for Colorful

Flowers to Plant Early Indoors

Some annuals that can be started indoors or in the hot-bed are: Dwarf Dahlias, Asters, Alyssums, Verbenas, Petunias, Carnations, Salvias, Nicotiana, Ageratum, Sweet Peas, Snapdragons, Lobelias, Phlox Drummondii, and Stocks. The seed may be started in flower pots or even old coffee cans provided they are properly drained; use the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each container. Such containers require less space than flats, and may be handled much more easily. Set the container in a saucer or similar receptacle which is constantly filled with water. The pot automatically soaks up the amount of moisture required. To insure against damping off, mix Seedtone with the seeds at time of planting.

A Colorful Border of ANNUALS

Summer and autumn gardens would be dull indeed were it not for the wide variety of annual flowers which we can all enjoy with little effort. Our gardens are becoming more important in our every-day lives as a place where we can spend leisure hours for relaxation, and we are naturally anxious to make them gay and bright. Annuals can be used to brighten and lend interest to your home as illustrated below. By choosing distinctive varieties such as are illustrated on these pages, you can often achieve unusual effects. They are very useful in filling the space left by spring-flowering bulbs. Plant annuals in groups of the same color, and try to avoid straight-row planting.

CAMELLIA-FLOWERED BEGONIAS

Camellia-Flowered Begonias

Especially adapted to shady areas

Bulbs may be started indoors in February or March. Plant one bulb in a 4 or 5-inch pot and cover with about 1 inch of soil. A soil mixture that contains $\frac{1}{3}$ leaf mold or peat moss and $\frac{2}{3}$ garden loam is ideal. Water sparingly until bulbs make growth.

These bulbs may also be planted directly outdoors any time after May 15. They may be set 9 or 10 inches apart. From bulbs started indoors early, you can enjoy a longer flowering period than from those planted directly outdoors. When set outside, they should be planted in a moist shaded area.

Floribunda Roses require less care than most Roses. They can be used in foundation plantings, along walks, as hedges, or in the border. For continuous bloom from June until frost you can't beat them.

Roses for Every Garden

For border plantings use Floribundas; for fences, trellises, and arbors use Climbers. Best for cutting: Hybrid Teas.

BOVUNG COW MANURE FOR ROSES

In the spring, carefully prepared dry cow manure is especially recommended for use in beds. It will not burn and may be used at the rate of 20 lbs. per 100 sq. ft. or 1 qt. per plant. 10 lbs. \$1.15; 25 lbs. \$1.75; 50 lbs. \$2.85; 500 lbs. \$26.50.

QUALITY OF McARDLE'S ROSES

We believe you would prefer to pay the slight difference in price for the best in Roses rather than a lower price for inferior quality. The difference in satisfaction will be well worth while because of better flowering qualities. Ali McArdle's Roses are individually wrapped to insure you the best. Each plant is properly labeled so that any mix-up on varieties, which commonly occurs in mail-order houses, is carefully avoided. On the right is an illustration of one of our Roses packed in moist moss.
